

The healthcare industry relies on dependable Power Quality and Management systems to ensure continuous operations of critical facilities and equipment.

Hospitals, clinics, and labs need a consistent power supply for life-saving equipment like ventilators and monitors. Uninterruptible Power Supply (UPS) solutions are vital for protecting against power disruptions that could affect patient care.

Stable power supports digitised medical records, telemedicine, and imaging technologies, while effective management optimises energy usage and ensures regulatory compliance. Prioritising power quality enhances patient outcomes and efficiency, maintaining high standards of care while minimising risks and disruptions.

### Powering the Healthcare Industry since 2002

As Australia's leading specialist in Power Quality and Management Solutions, Power On Australia has worked with hospitals, health research facilities and medical equipment manufacturers for over 20 years.

Our experienced engineers design bespoke power solutions, identifying products from leading vendors, then testing these products prior to delivery to ensure compliance with medical standards.

### Why we're trusted by industry leaders

As an Australian owned and managed business, we are renowned not only for our innovative technical expertise, but also for our industry leading personalised and responsive service.

*"The difference in service between the other company and Power On Australia was like night and day. Overall, I found Power On Australia's integrity and honesty to be refreshing."*

Manager, QLD Ambulance Service

Design | Test | Install | 24/7 Support | Maintenance | Spare Parts

#### Mater Private Hospital

In collaboration with the hospital's onsite engineers, Power On Australia designed and installed key Power Quality equipment supporting hospital telecommunications. This included a comprehensive Power Protection system featuring two large 80kVA UPS systems in parallel, along with power distribution and system monitoring. We also provide ongoing maintenance and remote monitoring services, ensuring immediate onsite response in case of a power event.

#### Queensland Childrens Hospital

For over 10 years, Power On Australia has provided Preventative Maintenance services for the hospital's power quality equipment. This program is detailed and comprehensive, identifying potential power risks in equipment and systems long before they occur.

#### AGFA Healthcare

Power On Australia has been a trusted supplier of specific UPS units tailored to various AGFA imaging machines. These UPS units ensure that battery backup is always integrated and considered as an essential component of their package, guaranteeing uninterrupted operation of AGFA's critical imaging equipment.

#### City Fertility

Power On Australia conducts Power Audits for City Fertility, catering to their specialised laboratory equipment requirements, which include Incubators, Microscopes, Vaccine Fridges; as well sperm, egg, and embryo freezing units. We have designed, supplied, installed, and commissioned numerous tailored Power Quality configurations, ensuring continuous and reliable power supply for City Fertility's critical operations.

#### Queensland Ambulance Service

Initially engaged to address on-site generator issues, Power On Australia identified that Queensland Ambulance had been purchasing equipment in larger sizes than necessary. We have since advised Queensland Ambulance on their site-specific Power Quality requirements, resulting in significant energy and cost efficiencies.

#### Redcliffe Hospital

Power On Australia provides ongoing Preventative Maintenance of UPS systems throughout the hospital. We also provide technical support and guidance to Site Engineers on the purchase and installation of UPS equipment.

#### Nanosonics

Power On Australia proudly offers Preventative Maintenance Services for Nanosonics' Power Quality equipment, supporting their research and innovation division in developing groundbreaking technologies to prevent life-altering infections.
